This document confirms with interested parties that WAP Sustainability Consulting has independently verified that the Clearloop Jackson Project has followed all requirements and processes including documentation and calculations stated in both the Clearloop Carbon Standard and the Clearloop Solar Forecast Methodology for the purpose of quantifying the carbon emissions avoided by the project.

WAP Sustainability first reviewed both the Carbon Standard and Solar Forecast Methodology to become acquainted with the requirements. A process was created to note all requirements within both documents and used to compare against the real-world practices and application in the Jackson Project. WAP referenced the Implementation Plan, Annual Report, and other stand-alone documentation and carefully reviewed the provided information, documentation, calculation steps and other criteria to make the determination that the project did in fact adhere to the standards.

This verification is limited to assessing compliance with the Carbon Standard and Solar Forecast Methodology. It should not be interpreted as an endorsement or critique of the validity, adequacy, or applicability of the referenced standard and methodology.

Signed,

JP Bruner

Sustainability Manager, WAP Sustainability
